

Student Learning Outcome #4 #5:

ABO grading of the graduated residents clinical examinations in November 2023 indicated that all participants passed. Results of this comprehensive examinative refore, indicated that all residents are effectively learning the material and mastering the required didactic information and clinical concepts. Comparing this national exam results to our clinical evaluation validate our methodology of assessimeents discrepancy was found.

From outcome #2 it was clear that personality traits have a distinct effect on the resident's learning ability and performance. This includes empathy, inperformance collaboration skills, and emotional intelligencerative tred residents for example were consistently evaluated as better provider of patient care. Those who display high levels of openness were evaluated as less adequate feegilized. However, residents who were conscientious seem to be good at evaluating their own performance. These insights will be used in the future abuate the program admission committee screening questions. Also having these results available for the program will help prepare graduating residents to understand and appreciate sesponsibility as it relates to the practice of orthodontics, orthodontic education and research.

Regarding outcome #3, second year residents will assist in the practice teaching course by preparation and presenting their assigned lectures under fa
